## Forord

I denne publikasjonen legges det fram kvartalsvise nasjonalregnskapstall for perioden 1978 -1990. Den følger i store trekk presentasjonen i publikasjonen som dekker perioden 1981 - 1986. Tidligere har SSB utgitt kvartalsvise nasjonalregnskap for perioden 1966 - 1977 i egen publikasjon og for periodene 1951 - 1956 og 1959 - 1970 i Statistisk månedshefte.

De publiserte tallene for årene 1989 og 1990 er foreløpige. For løpende kvartalspublisering vises det til Økonomiske analyser og Statistisk ukehefte.

Nytt i denne publikasjonen er at fastpristallene er erstattet med volumindeks, på samme måte som i publiseringen av de årlige nasjonalregnskapene.

De kvartalsvise nasjonalregnskapene i denne publikasjonen er i overensstemmelse med den tilrådingen som FN har gitt i publikasjonen A System of National Accounts (1968) som ble innarbeidd i det norske nasjonalregnskapet i 1973.

Konsulent Pia Tønjum og førstekonsulent Steinar Todsen har stått for arbeidet med publikasjonen.

Statistisk sentralbyrå, Oslo, 24. april 1992

## Preface

This publication provides quarterly national accounts estimates for the period 1978 - 1990. It follows mainly the presentation in the publication covering the period 1981 - 1986. Earlier CBS has issued quarterly national accounts for the period 1966 - 1977 in a separate publication and for the periods 1951 - 1956 and 1959 - 1970 in the Monthly Bulletin of Statistics.

The figures for 1989 and 1990 are provisional. Current estimates are published in "Økonomiske analyser" and "Statistisk ukehefte".

A new element in this publication is that the constant-price estimates have been replaced by volume indices.

The quarterly accounts estimates of this publication are in accordance with the recommendations given by the UN in the publication A System of National Accounts (1968) which was introduced in the Norwegian system of national accounts in 1973.

The publication has been prepared under the supervision of Ms. Pia Tønjum and Mr. Steinar Todsen.

Central Bureau of Statistics, Oslo, 24 April 1992

<sup>1)</sup> Reference to NATIONAL ACCOUNTS STATISTICS 1989

## 1. Innledning

Statistisk sentralbyrå har siden begynnelsen av 1950-årene løpende utarbeidd årlige nasjonalregnskap for norsk økonomi. Regnskapet gir informasjon om år-til-år bevegelsene i økonomien, for eksempel vekst i bruttonasjonalproduktet, prisstigning, endring i handelsbalansen osv.

Ved analyser av korttidsbevegelsene i økonomien dekker det årlige regnskapet en for lang periode. Fram til 1970 beregnet SSB løpende også kvartalsvise nasjonalregnskap, men disse beregningene ble innstilt av ressurshensyn i forbindelse med omleggingen til ny nasjonalregnskapsstandard.

I 1983 startet arbeidet med et nytt beregningsopplegg for kvartalsvise nasjonalregnskapstall, i form av et realregnskap i faste og løpende priser. Løpende publisering av kvartalstall beregnet etter det nye opplegget startet i 1985. Det er også beregnet kvartalstall tilbake til 1978.

Hovedresultatene fra disse beregningene for årene 1978 - 1990 er gjengitt i tabelldelen av denne publikasjonen. Det publiseres tall i løpende priser i millioner kroner og volum- og prisindeks med 1985 som referanseår. Kvartalsregnskapets databank gir mulighet for uttak av flere typer tabeller enn de som er publisert her. Det gjelder tabeller med mer detaljert inndeling (etter kvartalsregnskapets kontoplan), tabeller med fastpristall, volumindeks og prisindeks med andre referanseår og tabeller med prosentvise vekstrater. Slike tabeller kan fås kjøpt, evt. på diskett, ved henvendelse til SSB.

De to neste kapitlene inneholder en generell oversikt over nasjonalregnskapet, mens kapittel 4 gir en beskrivelse av beregningsopplegget for kvartalstallene.

## 2. Hovedtrekk i systemet for nasjonalregnskapsstatistikk

Nasjonalregnskapet har som hovedformål å gi en oversikt over et lands økonomiske status og en beskrivelse av utviklingen fra en periode til en annen.

I utforming av nasjonalregnskapet er det lagt stor vekt på bruken av regnskapet til analyseformål. Regnskapet gir både en systematisk statistisk beskrivelse av økonomien som helhet og en detaljert kartlegging av transaksjonene mellom de ulike deler av økonomien og mellom Norge og andre land. I denne kartleggingen gjør en bruk av definisjoner og klassifikasjoner som ikke er objektivt gitt, men bestemt etter vedtatte regler og konvensjoner, ofte som resultat av internasjonalt samarbeid. På alle vesentlige punkter følger regnskapssystemet de tilrådinger som FN har gitt i publikasjonen: "A System of National Accounts". Studies in Methods, Series F, No. 2, Rev. 3. United Nations, New York, 1968.

Hovedtrekk ved det nåværende nasjonalregnskapet er bl.a. beskrevet i følgende publikasjoner fra Statistisk sentralbyrå: "Nasjonalregnskapsstatistikk 1989", Norges offisielle statistikk NOS B 981, "Nasjonalregnskap, modeller og analyse", Samfunnsøkonomiske studier nr. 26 og "Revidert Nasjonalregnskap", Statistiske analyser nr. 14. En detaljert beskrivelse av beregningsprinsippene og datagrunnlaget i nasjonalregnskapet er gitt i publikasjonen "Nasjonalregnskapet i Norge - System og beregningsmetoder", Samfunnsøkonomiske studier nr. 45. Kvartalsregnskapet er beskrevet i "Det norske nasjonalregnskapet. Dokumentasjonsnotat nr. 20.", Rapporter nr.85/9.

Som for andre typer regnskaper, f.eks. bedriftsregnskaper, kan nasjonalregnskapet beskrives som et kontosystem der prinsippene om dobbelt bokholderi er tatt i bruk. Kontiene kan gruppere i to hovedtyper. Den første gruppen er balansekonti, som gir oversikt over status på et gitt tidspunkt. Den andre gruppen kalles transaksjonskonti, og inneholder informasjon om de transaksjonene og andre forhold som fører til at balansene endres i løpet av en regnskapsperiode.

Kontoplanen for nasjonalregnskapet omfatter følgende hovedkontotyper:

0. Åpningsbalansekonti
1. Varekonti
2. Produksjonskonti
3. Konsumkonti
4. Inntektskonti
5. Realkapitalkonti

6. Kapitalkonti for institusjonelle sektorer
7. Konti for utlandet
- 8 Omvurderingskonti
9. Avslutningsbalansekonti

Kontiene representerer i prinsippet alle økonomiske aktører hjemmehørende i Norge og enheter i utlandet som har transaksjoner med Norge. Nasjonalregnskapet opererer med to hovedtyper av økonomiske aktører.

Den første hovedtypen kalles funksjonelle enheter og består av bedrifter og virksomheter innen offentlig forvaltning hvor det tas beslutninger om produksjon. De funksjonelle enhetene gruppertes sammen i ulike produksjonssektorer eller næringer, basert på hvilken type produksjonsvirksomhet den enkelte enheten hovedsakelig er engasjert i. Inndelingen i sektorer bygger på Standard for næringsgruppering i offentlig norsk statistikk.

Den andre hovedtypen av økonomiske aktører kalles institusjonelle enheter. Den institusjonelle enheten er i første rekke definert og avgrenset ut fra eierforhold. (Et foretak, som i prinsippet skal omfatte alle bedrifter med samme eier, er en institusjonell enhet). På denne måten får vi identifisert enheter som foretar økonomiske beslutninger i vid forstand, blant annet finansieringsbeslutninger. De institusjonelle enhetene gruppertes til institusjonelle sektorer. Det er fire hovedsektorer: offentlig forvaltning, finansinstitusjoner, ikke-finansielle foretak og husholdninger. For en institusjonell enhet kan det i prinsippet stilles opp et fullstendig regnskap både for drift og balanse. Det er derfor naturlig å legge institusjonelle enheter til grunn ved finansstatistiske analyser, mens funksjonelle enheter legges til grunn ved f.eks. produksjonsanalyser.

Begrepsmessig kan nasjonalregnskapet deles i to: Et realregnskap og et inntekts- og kapitalregnskap.

Realregnskapet skal gi et bilde av realøkonomien, dvs. produksjon av varer og tjenester, konsum og realinvestering, utenrikshandel og inntektsopptjening knyttet til produksjon.

Kjernen i realregnskapet er et sektor-vare-kryssløp som gir en detaljert oversikt over tilgang og bruk av varer og tjenester. Hver vare eller tjeneste er representert med en egen konto. Disse

kontiene registrerer tilgangen av hver enkelt vare- og tjenestegruppe fra de innenlandske produksjonssektorene og import, og fordeler tilgangen enten som vareinnsats til de samme produksjonssektorene eller som "sluttleveringer" til:

- Privat konsum
- Konsum i stats- og trygdeforvaltningen
- Konsum i kommuneforvaltningen
- Investeringer i fast realkapital i næringsvirksomhet
- Investeringer i fast realkapital i stats- og trygdeforvaltningen
- Investeringer i fast realkapital i kommuneforvaltningen
- Lagerendring
- Eksport

Detaljgraden i realregnskapet (antallet sektorer og vare- og tjenestegrupper) varierer sterkt mellom de ulike regnskapsversjonene. Det kan nevnes at det mest detaljerte årsregnskapet, Endelig regnskap, har ca. 1750 varer og tjenester og 190 produksjonssektorer, mens kvartalsregnskapet har 55 varer og tjenester og 50 produksjonssektorer. En oversikt over de forskjellige kontiene finnes i publikasjonen "Kontoplanen i nasjonalregnskapet", som er utgitt i serien Standarder for norsk statistikk.

Realregnskapet inneholder i tillegg til sektor-vare-kryssløpet også en registrering av hvilke inntekter som "skapes" i de funksjonelt definerte næringssektorer.

Inntekts- og kapitalregnskapet har til hovedoppgave å vise hvordan inntektene i samfunnet blir fordelt og brukt, hvordan formue og gjeld er fordelt og hvordan fordrings- og gjeldsforholdene endrer seg over tid. Opplysninger om dette registreres på konti for institusjonelt definerte sektorer. For hver institusjonell sektor kan det stilles opp balansekonti, inntektskonti, kapitalkonti og omvurderingskonti.

### 3. Definisjoner av og sammenhenger mellom sentrale begreper i nasjonalregnskapet

**Norsk territorium** defineres som land- og sjøområder innenfor landets politiske grenser - eksklusive utenlandske ambassader mv. og internasjonale organisasjoner på norsk jord, men inklusive norske ambassader mv. i utlandet og norske skip, fly og boreplattformer (uansett hvor de befinner seg).

**Norske produksjonsenheter** omfatter alle produksjonsenheter på norsk territorium.

**Bruttoproduksjonsverdien** i en produksjonssektor i en periode er verdien av de varer og tjenester som sektoren produserer i løpet av perioden. Her kan nevnes et par viktige avvik. Alt salg av handelsvarer regnes for utført av varehandelen, selv om det er en industribedrift som står som selger. Likeledes regnes alt bygge- og anleggsarbeid som utført av bygge- og anleggssektoren. For enkelte sektorer er produksjonsbegrepet litt spesielt: I varehandelen er bruttoproduksjonen satt lik bruttoavansen, i offentlig forvaltning (forsvar, offentlig administrasjon mv.) settes bruttoproduksjonsverdien lik kostnadene (inklusive kapitalslitet).

**Bruttoproduktet** i en sektor i en periode er lik bruttoproduksjonsverdien i sektoren minus vareinnsats, dvs. verdien av anvendte råvarer, vedlikeholdsutgifter o.l. i sektoren i løpet av perioden.

**Bruttonasjonalproduktet** i en periode er lik summen av bruttoproduktene i de enkelte produksjonssektorene i perioden.

**Kapitalslitet** i en sektor i en periode er den beregnede verdireduksjonen av den faste realkapital (produksjonskapital) i sektoren som følge av slitasje og elde.

**Nettoproduktet** i en sektor framkommer som bruttoproduktet minus kapitalslitet.

**Nettonasjonalproduktet** er lik bruttonasjonalproduktet fratrukket summen av kapitalslitet i alle sektorer.

**Importen** i en periode representerer verdien av varer og tjenester mottatt fra utlandet i perioden. Summen av bruttonasjonalproduktet og importen representerer den del av den totale dis-

ponible vare- og tjenestetilgang som kan nytes til eksport, privat konsum, offentlig konsum eller bruttorealinvestering.

**Eksporten** i en periode representerer verdien av de varer og tjenester som er levert til utlandet.

**Det private konsum** i en periode uttrykker verdien av de varer og tjenester som nytes av landets husholdninger eller av konsumentorganisasjoner, dvs. private foreninger og institusjoner uten ervervskarakter, i perioden. Varige og halvvarige konsumgoder som biler, møbler og klær, regnes som konsumert i den periode de blir anskaffet. Et unntak er boliganskaffelser som regnes som bruttorealinvestering. I det private konsum inngår imidlertid et beregnet beløp for verdien av boligtjenester i perioden.

**Det offentlige konsum** i en periode omfatter kapitalslit på offentlig konsumkapital, lønnskostnader og utgifter til varer og tjenester disponert av stats-, trygde- og kommune- forvaltningen for løpende administrative og forvaltningsmessige formål i perioden, men ikke vare- og tjenesteforbruket i offentlige foretak. Posten er beregnet netto, idet det er gjort fradrag for varer og tjenester som stats- og kommuneforvaltningen har ytt private mot særskilt betaling (gebyr). Det skiller mellom militært og sivilt offentlig konsum. Det militære offentlige konsum omfatter godtgjøring til militært personell og alle utgifter til varer og tjenester, inklusive utgifter til anlegg og utstyr av varig karakter. Det sivile offentlige konsum omfatter godtgjøring til sivilt personell i stats-, trygde- og kommuneforvaltningen, unntatt bygge- og anleggsarbeidere, andre løpende offentlige utgifter til varer og tjenester for sivile formål og kapitalslit på offentlig konsumkapital. Utgifter til sivile bygge- og anleggsarbeider, biler, maskiner, redskap og inventar mv. regnes med som del av landets bruttorealinvestering.

**Bruttorealinvesteringene** i landet i en periode omfatter verdien av bruttoanskaffelser av offentlig konsumkapital og produksjonskapital inklusive lagerendringer i private og offentlige bedrifter, herunder boliger, i perioden. Bruttorealinvestering eksklusive lagerendringer består av bruttorealinvestering i fast realkapital og er spesifisert på artsgrupper, som bygninger og anlegg, skip og båter, andre transportmidler, maskiner, redskap og inventar, oljeborerigger og oljeutvinningsplattformer.

mer og olje- og gassrørledninger mv. Differansen mellom bruttorealinvesteringen i en periode og kapitalslitet er nettorealinvesteringen. Den gir uttrykk for tilveksten i landets realkapital i perioden.

Som et mål for den godtgjøring produksjonsfaktorene oppnår for sin innsats i en periode, nyttes begrepet faktorinntekt. Faktorinntekten i en sektor er definert som nettoproduktet i sektoren minus indirekte skatter (avgifter) som sektoren betaler pluss subsidier som sektoren mottar. Ved å summere faktorinntektene i de enkelte sektorene kommer en fram til den totale faktorinntekt for landet. Faktorinntekten kan deles i lønnskostnader og driftsresultat.

Lønnskostnader omfatter all inntekt opptjent ved arbeid i andres tjeneste og er spesifisert på fem komponenter: kontantlønn, naturallønn, andre ytelsjer til beste for lønnstakerne, arbeidsgiveravgift til folketrygden og arbeidsgiveravgift til andre trygdeordninger.

Driftsresultatet er den rest som står til disposisjon for foretakenes eiere til renter av fremmedkapital og som godtgjøring for innsats av eget arbeid og egen kapital. Driftsresultatet er i nasjonalregnskapet gruppert etter både funksjonell og institusjonell sektor.

Inntektsdelen i nasjonalregnskapet, inntektsregnskapet, viser hvordan inntektene i samfunnet i en periode blir fordelt mellom og brukt av institusjonelle sektorer. Den institusjonelle fordelingen av faktorinntekten gir informasjon om i hvilke sektorer denne er opptjent. Korrigeres faktorinntekten opptjent i hver institusjonell sektor for nettofinansinntekter, som renter og andre kapitalinntekter, for stønader, direkte skatter og andre overføringer, fremkommer disponibel inntekt (inntekt som kan disponeres til konsum eller sparing) for sektoren. Summeres disponibel inntekt for alle norske institusjonelle sektorer, fås disponibel inntekt for Norge, et begrep som også fremkommer ved at nettonasjonalproduktet i en periode korrigeres for rente- og stønadsoverskuddet overfor utlandet.

Den offentlige sektor omfatter offentlig forvaltning, offentlige finansinstitusjoner, statens forretningsdrift og selvstendige statlige og kommunale foretak, dvs. foretak som er minst 50 pro-

sent offentlig eid. Offentlig disponibel inntekt fratrukket offentlig konsum gir offentlig sparing.

Den private sektor består av husholdninger og alle institusjoner og foretak som ikke er offentlige. Privat sparing er lik differansen mellom privat disponibel inntekt og privat konsum.

## 4. Kvartalsvis nasjonalregnskap

### 4.1. Oversikt over kontoplanen i kvartalsvis nasjonalregnskap

I prinsippet er kontoplanen for kvartalsregnskapet den samme som for årsregnskapet. Kvartalsregnskapet mangler imidlertid

Åpningsbalansekonti  
Kapitalkonti  
Omvurderingskonti  
Avslutningsbalansekonti

Med unntak av renter, aksjeutbytte mv. til og fra utlandet er finansielle strømmer ikke med.

Spesifikasjonene i kvartalsregnskapet er utarbeidd som aggregater av de tilsvarende størrelsene i årsregnskapet. Kvartalsregnskapet har følgende konti som det er beregnet tall for:

- 55 varekonti (varer og tjenester)
- 50 produksjonskonti (av dette 7 for offentlig forvaltning)
- 22 konsumkonti for privat konsum
- 2 konsumkonti for offentlig konsum (statlig og kommunalt)
- 33 konti for investering i fast kapital i næringsvirksomhet
- 6 konti for investering i fast kapital i offentlig forvaltning (3 i stats- og trygdeforvaltningen og 3 i kommune-forvaltningen)
- 8 konti for investering etter art
- 1 konto for lagerendring
- 1 konto for eksport
- 1 konto for import

En liste med kontospesifikasjonene finnes i publikasjonen "Kontoplanen i nasjonalregnskapet" i serien Standarder for norsk statistikk.

## 4.2. Opplegg for publisering og utarbeiding av kvartalsregnskapet

### 4.2.1. Publisering

Den første versjonen av regnskapet for et kvartal publiseres om lag to måneder etter kvarstalets utgang, i Økonomiske analyser og Statistisk ukehefte. Tabellene dekker kvartalene i inneværende år og året før. De publiserte tallene er noe mer aggregert enn kontoplanen som er nevnt i avsnitt 4.1.

Kvantalsregnskapet er ikke sesongkorrigert. Mange av tallseriene viser klare sesongvariasjoner og en endring fra et kvartal til det neste kan derfor skyldes normal sesongvariasjon. Sesongjusterte tall for noen hovedstørrelser publiseres løpende i Økonomiske analyser.

Beregningsopplegget for det kvartalsvise nasjonalregnskapet brukes også til å beregne de to første versjonene av det årlige nasjonalregnskapet. Utsyns-regnskapet publiseres en måned etter utløpet av beregningsåret, mens Mars-regnskapet kommer tre måneder senere.

I denne publikasjonen presenteres tabeller med kvartalstall for hovedstørrelser i Nasjonalregnskapet for perioden 1978 til 1990 (se tabellregisteret). I tillegg til de tabellene som publiseres i det løpende kvartalsregnskapet er det tatt med tabeller for prisindeks og en tabell som viser faktorinntekt etter næring.

Det publiseres tall i løpende priser som nivåtall i millioner kroner. Fastpristallene gis som volumindeks med gjennomsnittet for 1985 = 100. Prisindeksene har også 1985 som referanseår.

### 4.2.2. Kilder og beregningsopplegg

Beregningene av det kvartalsvise nasjonalregnskapet bygger på et omfattende datamateriale, i alt ca. 1700 dataserier. Grunnstammen i beregningene er Statistisk sentralbyrås korttids-

statistikker, slik som prisindeksene, produktionsindeksen, investeringstellingen, detaljomsetningsindeksen, utenrikshandelsstatistikken osv. på detaljert nivå. I tillegg brukes en del annen korttidsinformasjon, som for eksempel kvartalsregnskap fra Postverket og Televerket. Datamaterialet er ordnet slik at det korresponderer entydig med vare-, sektor- og artsinndelingen i kvartalsregnskapet. På grunnlag av utviklingen i disse korttidsindikatorene og nivåtallene i basisåret (som er t-2) beregnes de tilhørende nasjonalregnskapstallene for kvartalet.

Hvis en indikatorserie ikke er lang nok brukes anslag som beregnes som en enkel fremskrivning av den tidligere utviklingen i serien.

For enkelte variable finnes det imidlertid ikke noen informasjon om korttidsutviklingen. For en del av disse er kvartalstallene beregnet på grunnlag av årsanslag som er kvartalsfordelt. Deler av produksjonen i landbruket er for eksempel anslått på denne måten. Frem til 1986 ble kvartalstallene for offentlig sektor laget ved å dele årsanslagene på fire (nå brukes kvartalstall fra statsregnskapet og tertialtall fra Kommunenes Sentralforbund).

De størrelsene i nasjonalregnskapet som ikke blir bestemt direkte på grunnlag av korttidsinformasjon eller ved hjelp av årsanslag, fastlegges deretter ved at regnskapet avstemmes i faste og løpende priser. Denne avstemmingen gjøres ved hjelp av en kryssløpsmodell. Modellen bestemmer vareinnsats i de fleste sektorene ved at det forutsettes at den er proporsjonal med bruttoproduksjonen i kvartalet.

Hvilke variable som blir bestemt ved varebalanseringen varierer en del. For varer i ordinær forstand blir lagerendring residualbestemt. For tjenester og varer hvor det ikke kan forekomme lager, brukes varebalanselikningene til å bestemme en variabel på tilgangs- eller anvendelsessiden som vi helt eller delvis mangler informasjon om, dvs. enten produksjon i en sektor eller en av anvendelseskommponentene for konsum eller investering.

For enkelte varer finnes informasjon om både tilgang og anvendelse. For å skaffe nok frihetsgrader til å avstemme regnskapet, er det innført en korreksjonsvariabel i den aktuelle varebalanselikningen. Den økonomiske begrunnelsen for å innføre en slik variabel er at forutsetningen om faste,

gjennomsnittlige kryssløpskoeffisienter for året, brukt på kvartal, for mange varer kan være en urimelig betingelse. Det kan være sesongvariasjon i enkelte komponenter som ikke fanges opp ved å bruke faste kryssløpskoeffisienter. For eksempel innebærer forutsetningen om fast forhold mellom produksjon og vareinnsats at innsatsen av elektrisk kraft er konstant gjennom året. Ettersom vi ikke har noe holdepunkt for å fordele en slik uoverensstemmelse, er det valgt å beholde korrekjonen som en egen post i regnskapet.

Beregningssopplegget for kvartalsvis nasjonalregnskap er svært "mekanisert". Dette gjelder både framskrivningen av nasjonalregnskapets variable ved hjelp av korttidsinformasjon, selve varebalanseringen, avgifts- og inntektsberegningene og avstemmingen av økosirkssammenhengene. Når vi ser bort fra datatilgangen, er dette kanskje den største forskjellen fra det årlige nasjonalregnskapet, hvor det blir lagt mye arbeid i vurdering av tallene og fordeling av residualer. Det vil være for tidkrevende å gjøre et slikt arbeid hvert kvar- tal.

Imidlertid er det innarbeidd korreksjonsledd i systemet som gjør det mulig å utnytte informasjon utover den som inngår i de ordinære beregningene. Dette har vært ønskelig både fordi data-materialet på enkelte områder er spinkelt, fordi en indikator i et kvartal kan utebli eller fordi en spesiell hendelse i økonomien kan gi en åpenbar feil utvikling for den variabel som skal beskrives. Korreksjonsleddene er fullstendig integrert i beregningene slik at alle slike rettinger blir tatt hensyn til både på verdi- og volumsiden i regnskapet.

Beregningssopplegget for det kvartalsvise nasjonalregnskapet brukes også til å beregne de to første versjonene av årsregnskapet. Det såkalte Utsyns-regnskapet, som publiseres om lag en måned etter årets utgang, beregnes som summen av ordinære kvartalsregnskap for de tre første kvartalene og anslag på fjerde kvartal. Til Mars-regnskapet, som publiseres ca. tre måneder senere, er de fleste indikatorseriene komplette. Dessuten er det skifte av basisår i forhold til Utsyns-regnskapet, fra år t-2 til t-1.

#### 4.2.3. Kjeding av fastpristall

På grunn av det årlige skiftet av basisår for beregningene har vi i utgangspunktet ikke noen sammenhengende tidsserie med fastpristall over flere år. For å få en tidsserie med sammenlignbare tall må de opprinnelige fastpristallene kjedes til et felles referanseår. Dette gjøres ved å multiplisere det opprinnelige fastpristallet for hvert kvartal med en prisindeks som viser prisnivået i referanseåret i forhold til basisåret.

Denne metoden brukes på alle aggregeringsnivåer. Vi kjeder fastpristallene på aggregert og detaljert nivå hver for seg. Dette gir det mest korrekte resultatet for utviklingen i aggregatene, men gjør også at vi får ikke-additivitet i tabellene. Det vil si at summen av fastpristallene for de detaljerte seriene ikke blir lik fastpristallet for aggregatet.

Med utgangspunkt i tidsserier med fastpristall med felles referanseår kan en så lage volumindeks av den typen som presenteres i denne publikasjonen. Det gjøres ved å dividere tallet i hvert kvartal med gjennomsnittet for kvartalene i det året som skal være referanseåret for indeksen (i vårt tilfelle 1985). Til slutt multipliseres den nye serien med 100.

Ved hjelp av volumindeksene kan en igjen lage fastpristall med ulike referanseår. Dette kan gjøres på følgende måte: Først omregnes volumindeksen til nytt referanseår ved å dividere den opprinnelige serien med gjennomsnittet for referanseåret. Den nye indeksen multipliseres så med nivåtallet i løpende priser i referanseåret dividert på fire. Hvis dette gjøres separat på detaljerte serier og aggregater vil en også her få ikke-additivitet.

#### 4.2.4. Avstemming mot årlig regnskap

Regnskapet for ett kvartal vil bli revidert en rekke ganger etter at det er publisert første gang. Særlig gjelder dette 1. kvartal. Det vil for det første bli beregnet på nytt etter hvert som også de etterfølgende kvartaler i året blir beregnet, så ved beregningen av Mars-regnskapet og deretter ved hver avstemming mot nye årlige regnskap. Når en har valgt å stadig revidere tallene, er det fordi

det i konjunkturovervåkingen må være viktig å utnytte den informasjon som faktisk finnes, slik at en kan danne seg et mest mulig korrekt inntrykk av utviklingen.

I tillegg til Utsyns- og Mars-regnskapet beregnes det ytterligere to versjoner av det årlige nasjonalregnskapet. November-regnskapet publiseres et år og tre måneder etter utløpet av beregningsåret, mens Endelig regnskap kommer etter to år og tre måneder. Disse regnskapene har tildels andre datakilder og beregnes på et mer detaljert nivå enn kvartalsregnskapet.

På grunn av de nevnte forskjellene mellom årlig og kvartalsvis nasjonalregnskap vil summen av de første kvartalsregnskapene for et år vanligvis avvike fra tallene i November-regnskapet og Endelig regnskap. Når disse foreligger blir det derfor beregnet nye kvartalstall ved å fordele årstallet ut på kvartaler med de opprinnelige tallene som utgangspunkt. De nye kvartalstallene summerer seg over året opp til de årlige regnskapene i faste og løpende priser. Selv om de indikatorene som er brukt i de løpende beregningene kan være et for dårlig mål på nivået, kan de gi et godt uttrykk for utviklingen i serien. Hvis korttidsbevegelsen i serien gir et rimelig inntrykk, er det derfor ønskelig å foreta avstemmingen mot årlig regnskap slik at kvartalsmønsteret fra de opprinnelig beregnede regnskapene bevares best mulig. Avstemningen følger da det prinsippet at endringen fra kvartal til kvartal i avviket mellom de opprinnelige kvartalstallene og de som er avstemt mot årlig regnskap skal være minst mulig. Summen skal stemme med årstallet og verdien av avviket i det siste kvartalet som tidligere er avstemt mot et årlig regnskap holdes uendret. Uten denne betingelsen ville avviket bli fordelt proporsjonalt ut på kvartalene, og det opprinnelige kvartalsmønsteret gjennom året ville bli perfekt reproduksert. Men en slik avstemmingsroutine vil kunne gi en tallserie som viser brudd ved årsskiftene, fordi hvert av årene blir proporsjonalt justert med hver sin faktor; størrelsen på avviket fra årlig regnskap kan endres fra år til år. For å få tidsserier som er sammenhengende over tid, er derfor kravet om kontinuitet over årsskiftene pålagt beregningene. Ved den valgte avstemmingsrutinen vil avviket bli fordelt ulikt utover året og dermed endre sesongmønsteret i serien.

Endringen i forløpet vil bli størst hvis avviket endres systematisk over tid og minst hvis det ikke viser noen essentlig endring.

De fleste tidsseriene avstemmes uavhengig av de andre seriene i regnskapet. De kvartalsregnskapene som er tilgjengelige i ettertid vil derfor ikke uten videre være avstemt innen hvert kvartal, men bare som sum over året. Den avstemmingsfeilen som oppstår føres som en korrekjonspost på tilgangssiden i regnskapet.

Verdi- og volumtallene avstemmes for det meste uavhengig av hverandre. Ettersom avviket fra årlig nasjonalregnskap kan være ulikt målt i de to verdisettene, vil sesongmønsteret i seriene kunne endres forskjellig. Dette vil kunne få konsekvenser for utviklingen i prisindeksene i den avstemte tidsserien.

#### 4.2.5. Svakheter ved beregningene

Ved bruk av regnskapet må en være klar over en del svakheter. Først og fremst gjelder dette dårlig datagrunnlag på en del områder. Særlig er mange av tallene for tjenesteytende sektorer usikre. Det samme gjelder for bygge- og anleggsvirksomhet og varehandel. Områder som er godt dekket av korttidsstatistikk er industrien, varekonsumet og utenrikshandelen.

En måte å måle kvaliteten på kvartalstallene er å sammenligne resultatene fra de to første versjonene av årsregnskapene med tallene i endelig regnskap. Utsyns- og Mars-regnskapene bruker stort sett de samme datakildene som kvartalsregnskapet, og har siden 1985 blitt utarbeidet med samme beregningsopplegg. En slik sammenligning er foretatt for årene 1972 til 1987 i en artikkel i Økonomiske analyser nr. 7-1990 (Kvaliteten på foreløpig nasjonalregnskapsstatistikk). I artikkelen studeres vekstratene for hovedstørrelsene bruttonasjonalprodukt, privat konsum, offentlig konsum, bruttoinvestering, eksport, import og bruttoproduktet i industrien. Hovedkonklusjonen er at de foreløpige tallene er beheftet med forholdsvis store og systematiske feil. De foreløpige regnskapene har en tendens til å vise for liten vekst, men det er også endel tilfeldige utslag. Likevel endres det makro-

økonomiske bildet relativt lite fra de foreløpige til det endelige regnskapet.

En annen side ved kvaliteten på kvartalsregnskapstallene er kvartalsmønsteret. Det er vanskelig å vurdere hvor godt dette er, fordi vi ikke har noen "fasit" tilsvarende Endelig regnskap å sammenligne med. Dessuten vil, som nevnt ovenfor, avstemmingen av kvartalstallene mot tilsvarende årsdata endre kvartalsmønsteret i serien, og denne endringen kan være forskjellig i ulike år avhengig av hvor stor feilen er. Utviklingen i den avstemte serien kan derfor være noe forskjellig fra den opprinnelige beregnede serien. En tilsynelatende endring i utviklingen i serien kan skyldes tekniske faktorer ved beregningene.

Ved bruk av de kvartalsvise faktorinntekts-

tallene, bør en være oppmerksom på den noe forenklete beregningsmåten i forhold til årlig nasjonalregnskap. Avgifts- og subsidieberegningene er gjort etter en mer aggregert artsinndeling. Det er dessuten bare unntaksvis tatt hensyn til at leveranser til ulike anwendelser kan ha ulik pris. Stort sett er det bare skilt mellom pris på leveranser til hjemmemarkedet og på leveranser til eksport.

Brukere av tallene må derfor være forsiktige med å trekke sterke konklusjoner på grunnlag av endring i en serie fra et kvartal til neste. Tallene bør derimot kunne være et viktig hjelpemiddel for å studere en utviklingstrend som strekker seg over flere kvartaler, og for å kunne si noe om utviklingen for større grupper av variable.

## 1. Introduction

From the beginning of the 1950s, Central Bureau of Statistics has been compiling annual national accounts for the Norwegian economy. The accounts give information on the yearly development of the economy; for instance growth in gross domestic product, inflation, change in the external trade etc.

A year is a too long period to analyse the short-term movements of the economy. Until 1970, the Bureau currently compiled quarterly national accounts. This compilation ceased due to lack of resources when we switched to the revised SNA.

In 1983 work was started on the development of new methods for the compilation of quarterly national accounts on a current basis. The compilation aimed at presenting reconciled accounts at constant and current prices for the real economy. Current estimates prepared with the new system have been published since 1985. The Bureau has also prepared quarterly accounts for the years 1978 - 1984 based on this new system of compilation.

The tables presented in this publication cover the years from 1978 to 1990. Figures at current prices are published in million kroner, while the volume and price indices have 1985 as reference year. Tables with a more detailed specification, other reference years or tables showing growth in percent, may be obtained (on paper or diskette) by contacting the CBS.

## 2. Review of the system of accounts

The main purpose of the national accounts is to give an overview of the economy and to describe the developments from one period to another.

In the preparation of the system of the national accounts, emphasis has been placed on the application of the accounts for analytical purposes. The accounts give both a systematic statistical description of the economy as a whole and a quite detailed map of the transactions between the

various parts of the economy and between Norway and other countries. This mapping makes use of concepts and classifications which are not objectively given, but stipulated according to adopted rules and conventions, often as a result of international collaboration. In all essential aspects the system of accounts follows recommendations given by the UN in the publication: "A System of National Accounts". Studies in Methods, Series F, No. 2, Rev. 3. United Nations, New York, 1968 (the present SNA).

The main features of the Norwegian system of National Accounts are described (in Norwegian only) in the following publications from the Central Bureau of Statistics: "National Accounts Statistics 1989", "National Accounts, Models and Analysis", Social Economic Studies No. 26 and "Revised National Accounts", Statistical Analyses No. 14. A detailed description of the system as well as sources and methods in the Norwegian national accounts is given in "National Accounts of Norway - System and methods of estimation", No. 45 in the series Social Economic Studies. An abbreviated English version is available in the series Reports (No. 81/1, title as above).

The national accounts are a comprehensive and balanced system of accounts for the Norwegian economy based on the principles of double entry book-keeping.

In the system of national accounts there are the following main classes of accounts:

0. Opening balance sheet accounts
1. Commodity accounts
2. Production accounts
3. Consumption accounts
4. Income and outlay accounts
5. Real capital accounts
6. Capital finance accounts for institutional sectors
7. Accounts for rest of the world
8. Revaluation accounts
9. Closing balance sheet accounts

In principle the accounts represent all economic units resident in Norway and foreign units having transactions with Norway. A distinction is made between functional and institutional units.

A functional unit is a production unit - an establishment or activity within general govern-

ment - which makes decisions about production. The functional units are classified by production or industrial sectors ("functional sectors") according to the kind of main economic activity. The classification by industrial sectors is based on Standard Industrial Classification in official Norwegian statistics.

The institutional unit is primarily defined and confined by type of ownership. (An enterprise, which in principle encompasses all establishments with the same owner, is an institutional unit). The institutional units are classified by institutional sectors. The four main sectors are: General government, financial institutions, non-financial enterprises and households. It is possible, in principle, to put forward a complete set of accounts, both current and balance sheet accounts, for an institutional unit. It is therefore convenient to use institutional units in financial analyses, while the functional unit is most appropriate for production analyses.

Conceptually, the national accounts may be divided in two parts: Production, consumption expenditure and capital formation accounts (the "real accounts") on the one hand, and income and outlay and capital finance accounts on the other.

The main body of the former part is a sector by commodity input-output matrix, which gives detailed commodity flows of supply and use of goods and services. Each commodity (group of goods and services), has a separate account. These accounts record the supply of goods and services from the production sectors and imports. The total supply is distributed either as intermediate consumption to the production sectors or as final demand to:

- Private final consumption expenditure
- Central government consumption expenditure
- Local government consumption expenditure
- Fixed capital formation by industries
- Fixed capital formation by producers of central government services
- Fixed capital formation by producers of local government services
- Changes in stocks
- Exports

The degree of detail varies considerably between the different versions of the national accounts. For instance, the most detailed version (the Final Accounts) specify about 1750 commodities and 190 production sectors, while the quarterly accounts have 55 commodities and 50 production sectors. A specification of the accounts is given in the publication "Accounting System of the National Accounts".

The real accounts include, in addition to the input-output accounts, a recording of the factor incomes created in the functionally defined industrial sectors.

The main task of the income and outlay and capital finance accounts is to display how income is distributed and used, how assets and liabilities are distributed and how the pattern of claims and debts changes over time. This information is recorded on accounts for institutionally defined sectors. For each sector balance sheet accounts, income and outlay accounts, capital accounts and revaluation accounts can be prepared.

### **3. Definitions and principal relationships in the national accounts**

Norwegian territory is defined as land and sea territory within Norwegian political borders - excluding foreign embassies etc. and international organizations in Norway, but including Norwegian embassies etc. abroad and Norwegian ships, aircraft and oil drilling platforms (regardless of location).

Norwegian units of production consist of all units of production within Norwegian territory.

Gross value of production (gross output) of a production sector in a certain period of accounting is the value of all goods and services produced by the sector in the period. A couple of exceptions should be mentioned. All merchandise is regarded in the accounts as sold from the trade industry, regardless of the fact that, say, a manufacturing enterprise may be a seller. Likewise, all building and construction work is attributed to the construction industry. In some sec-

tors the gross value of production is recorded in a special way: In the trade industry the gross value of production is equal to the gross trade and transport margin; for producers of general government services (defence, public administration etc.) the gross value of production is set equal to the cost of production (including consumption of fixed capital).

**Gross product** (value added) of a sector in a period is equal to the gross value of production less **intermediate consumption**, i.e. the value of raw materials used, maintenance cost incurred etc., in the sector during the period.

**Gross domestic product** in a period is the sum of the gross products of the sectors of production.

**Consumption of fixed capital** in a sector in a period is the imputed reduction in value of the fixed capital (of production) in the sector caused by wear and tear, etc.

**Net product** in a sector is defined as the gross product less the consumption of fixed capital.

**Net domestic product** is defined in the same way as gross domestic product minus consumption of fixed capital in all sectors.

**Imports** in a period represent the value of all goods and services received from abroad in the period. The sum of gross domestic product and imports represent that part of the total supply of goods and services which may be used for exports, private final consumption expenditure, government final consumption expenditure or gross capital formation.

**Exports** in a period represent the value of goods and services delivered to the rest of the world.

**Private final consumption expenditure** in a period comprises the value of goods and services used by resident households or by consumer organizations, i.e. private associations and institutions of a non-profit character. Durables and semi-durables such as cars, furniture and clothing, are treated as having been consumed at the time of purchase. However, purchases of new dwellings are treated as gross investments, and an imputed rental value is included as a private final consumption expenditure.

**Government final consumption expenditure** in a period comprises remuneration to personnel in general government, consumption of government fixed capital and expenditure on goods and services at the disposal of the central and local government administrations and the social security administration for current administrative purposes, but not consumption of goods and services by public enterprises. This item is net of goods and services which the central and local government administrations have supplied to the private sector against payment in the form of fees. A distinction is made between military and civilian government consumption expenditure. Military government consumption expenditure comprises remuneration to military personnel and all expenses on goods and services including constructions and durables. Civilian government consumption expenditure comprises remuneration to civilian personnel in general government (with the exception of building and construction workers), consumption of government fixed capital and other current government expenditure on goods and services for civilian purposes. Government capital expenditure on civilian building and construction work, motor vehicles, machinery etc. is included in the gross capital formation.

**Gross capital formation** includes gross fixed capital formation by producers of government services and by industries, including dwellings, and increase in stocks by manufacturers and traders. Gross capital formation exclusive of increase in stocks is termed gross fixed capital formation and is broken down by type of capital goods, such as buildings and construction, ships and boats, other transport equipment, machinery and equipment, oil drilling rigs, oil production platforms and pipelines, etc. The difference between gross capital formation and consumption of fixed capital constitutes a measure of the change in the stock of real capital termed **net capital formation**.

As a measure of the remuneration which the production factors receive, the term of factor income is employed. Factor income in a given sector is defined as the net product in the sector less indirect taxes paid by the sector plus subsidies received by the sector. The factor income for the nation as a whole is arrived at by summing

up the factor incomes of the individual sectors. Factor income may be broken down into compensation of employees and operating surplus.

**Compensation of employees** includes all income earned by employees as remuneration for their work, and is divided into five components: wages and salaries in cash, in kind, other benefits, employees' contributions to the National Insurance Scheme and to other social security schemes.

**Operating surplus** is the balance at the disposal of the owners of the enterprises for payments of interest on liabilities, as remuneration for their own labour and as return on their capital. The operating surplus is distributed both by functional and institutional sectors in the national accounts.

The income and outlay accounts are a part of the national accounts which show how the incomes in a period of time are distributed among and spent by the institutional sectors.

If the factor income by institutional sector of origin is adjusted for net financial income, transfers from government, direct taxes and other transfers, disposable income for each sector appears. Disposable income for all sectors add up to the **disposable income for Norway**. This concept could also be computed for a period by adjusting the net domestic product for transfers of income to and from the rest of the world.

The public sector comprises general government, public-owned banks and state enterprises which are enterprises at least 50 per cent owned by central or local government. Public disposable income less public consumption gives **public saving**.

The private sector consists of households and all non-public institutions and enterprises. **Private saving** equals the difference between private disposable income and private consumption.

## 4. Quarterly national accounts

### 4.1. Review of the system of quarterly accounts

In principle, the accounting system of the quarterly accounts is the same as for the annual

accounts. The quarterly accounts, however, do not include:

Opening balance sheets accounts  
Capital finance accounts  
Revaluations accounts  
Closing balance sheets accounts

Except for interest, dividends etc. to and from abroad, financial flows are not included.

The specifications in the quarterly accounts are derived by aggregations of similar items of the annual accounts. The quarterly accounts for the period covered by this publication thus consist of:

- 55 commodity accounts
- 50 production accounts (of which 7 for government services)
- 22 accounts for private final consumption expenditure
- 2 accounts for government final consumption expenditure
- 33 accounts for fixed capital formation by industries
- 6 accounts for fixed capital formation by producers of government services (3 for producers of central government services and 3 for producers of local government services)
- 8 accounts for fixed capital formation by type
- 1 account for changes in stocks
- 1 account for exports
- 1 account for imports

The specifications are listed in the publication "Accounting System of the National Accounts".

### 4.2. The framing of publishing and compilation of the quarterly accounts

#### 4.2.1. Publishing

The first version of the accounts for a quarter is published about two months after the end of the quarter, in Economic Analysis and in the Weekly Bulletin of Statistics. The tables cover the quarters of the current year and last year. The published

figures are somewhat more aggregated than the system of accounts mentioned in chapter 4.1.

The quarterly accounts are not seasonally adjusted. The figures contain to a large extent seasonal movements. Thus, changes from one quarter to another may be caused by such normal seasonal movements. Seasonally adjusted figures for some main aggregates are published in Economic Analysis.

The approach of the quarterly accounts is also used to compile the first two preliminary versions of the annual accounts. The first version, the Economic Survey Accounts, is published about one month after the end of the year. The second, called the March Accounts, is published about three months later.

In this publication we present quarterly national accounts covering the years 1978 to 1990 (see the index of tables). In addition to the tables used in the publishing of the current figures, we have included tables of price indices and a table showing factor income.

Figures at current prices are published in million kroner. The constant price figures are given as volume indices with the average of 1985 = 100. The price indices also have 1985 as reference year.

#### **4.2.2. Sources and methods of estimation**

Compilation of the quarterly national accounts implies the use of comprehensive data sets, more than 1700 series in all. The compilation is mainly based on the short-term statistics from the Central Bureau of Statistics, such as price indices, the index of production, the foreign trade statistics and so forth. In addition, we use some information from other sources, such as quarterly data from the postal service and the telegraph service. The data are arranged in a way that corresponds with the classification of commodities, industries and types in the quarterly accounts. Based on the development of these short-term indicators and current-price figures from the base year (which is t-2) we finally compute the figures of the quarterly national accounts.

If an indicator does not cover the current quarter we use a simple projection based on the previous development of the series.

However, for some variables information on short-term development is lacking. Figures for these variables are computed through breakdown of annual figures into quarters. Some of the production in agriculture is computed in this way, for instance. Until 1986 government expenditure on goods and services (at constant prices) were distributed equally on four quarters. However, since 1987 the quarterly figures have been based on quarterly or tertiary information.

The items in the national accounts that we neither have any short-term information on, nor computed by breakdown of annual figures, are computed residually by balancing the accounts at constant and current prices. This balancing is carried out using an input-output model. The model determines intermediate consumption in most of the production sectors by introducing the assumption that there are fixed relations between gross output and intermediate consumption throughout the quarter.

Which variables are computed by balancing depends on what kind of information that is available. For ordinary commodities change in stocks is a residual. For services and goods that are not stocked, the variables of either the supply or the disposition are computed by balancing. This may be domestic production in a sector or an item on the disposition side (consumption or fixed capital formation).

For some commodities, we have information on supply as well as on disposition. In order to have sufficient degrees of freedom in balancing the accounts, we have introduced an adjustment factor when balancing the equations. The economic reason for this is in fact that it may be unreasonable for many commodities to apply average annual input-output coefficients to a quarter. There may occur some seasonal patterns that are not taken into account through this. Such an assumption implies, for instance, that there is a fixed ratio between gross value of production and intermediate consumption of electric power throughout the year. As we do not have any basis

on how to distribute deviations on quarters, we have decided to keep the factor of adjustment as a separate item of the accounts.

The approach adopted to compile the quarterly national accounts is highly "mechanized". This concerns the updating of variables of the national accounts based on short-term statistics as well as the balancing of commodities, the computation of indirect taxes and factor incomes and the overall balancing of GDP and main aggregates. Apart from the data situation, this is maybe the main difference compared with the annual accounts, where much time is spent on evaluating the figures and distributing the residuals in a reasonable way. It is not possible to use this kind of manual operations in the compilation of the quarterly accounts.

However, by introducing the factors of adjustment, we do have the opportunity to utilize information which otherwise is not used. This opportunity has been desirable, partly because in some areas very scarce information is available, or some indicators fail to appear or partly because there may be some extraordinary occurrence in the economy that is missed by the indicators. The factors of adjustment are completely integrated in the compilation of figures both at constant as well as current prices.

The quarterly accounts are also used to compile the first two versions of the annual accounts. The Economic Survey Accounts are made by adding up the three quarters of the ordinary quarterly accounts and provisional estimates for the fourth quarter. The latter estimates are based on monthly data and other data available at that time. By the time of the March Accounts most of the indicator series are complete. There has also been a change of base year, from t-2 to t-1.

#### **4.2.3. Constant price figures and volume indices**

Because of the method we use in compiling the quarterly accounts, the original constant price figures change base year every year. To obtain comparable constant price figures for several years, they are "chained" to a common reference year. This is done by multiplying the original

quarterly figures with price indices showing the price level in the reference year in relation to the original base year.

This method is used at all levels of aggregation. We chain the aggregated and the disaggregated figures separately. The alternative is chaining only at the disaggregated level and then adding up to the aggregates. The aggregate figures computed using the former method have the same growth rates as the original figures. A problem with this method is non-additivity, i.e. that the sum of the disaggregated figures does not necessarily equal the aggregate.

Starting with constant price figures with a common reference year, we can compute the volume indices that we present in this publication. This is done by dividing the figure for each quarter by the average of the quarters in the reference year of the index (in this case, 1985). Finally, this new series is multiplied by 100.

Using the volume indices, it is possible to compute constant price figures with different reference years. This can be done in the following way: First, the volume index is given a new reference year (if necessary) by dividing it by the average of the new reference year. Then, the new index is multiplied by the current price figure of the reference year, divided by four. If this method is used on aggregated and disaggregated figures separately, we get the same problem of non-additivity as mentioned above.

#### **4.2.4. Harmonization with the annual accounts**

The quarterly accounts, in particular the first quarter of each year, will be available in several versions. The previous quarters within a year will be revised each time current quarterly accounts are compiled, through the compilation of the March Accounts and furthermore through the harmonization with the annual accounts. When we have decided to revise the figures currently, one consideration has been to utilize all available information in order to have as accurate a picture of the economic development as possible for the analyses of the cyclical movements.

In addition to the Economic Survey Accounts and the March Accounts, two other versions of the annual accounts are compiled. The November Accounts are published one year and three months after the end of the year, and the Final Accounts one year later. These two versions are compiled at a more detailed level and using other sources of information.

Due to these differences between the annual and quarterly accounts, the adding up of the first version of the quarterly accounts usually will differ from the November and Final Accounts. Because of this, the quarterly accounts are recalculated by distributing the annual figures on the quarters by using the original quarterly figures as keys. The recalculated quarterly accounts will then add up to the annual accounts at constant and current prices.

Even if the utilized indicators give a biased level for a variable, they may reflect changes well. If the short-term movement of a series is reasonable, it will be desirable to carry out the reconciliation with the annual accounts in such a way that the original quarterly patterns are restored as much as possible. The reconciliation or harmonization follows the principle that the differences between the quarterly changes of the original and harmonized series shall be as small as possible. The quarterly accounts should add up to the figures of the annual accounts, and the value of the differences of the last quarter of the previous year already harmonized should be kept unchanged. Without this requirement, the differences would be proportionally distributed on the quarters and the original quarterly patterns would be perfectly reproduced. However, a harmonization in that way could give a break in the homogeneity of a series at the turn of the year because each year will be proportionally adjusted by a given factor; the magnitude of the adjustments may be changed from one year to another. In order to get coherent series, it is necessary to impose continuity at the turn of the year. By the chosen method of harmonization, the differences may be distributed unequally throughout the year and through this the seasonal patterns could be changed. The changes in the seasonal patterns will be larger when the differences between the

quarterly and annual accounts increase and smaller if no considerable differences occur.

Nearly all series are harmonized independently of the other series, i.e. the final quarterly accounts available may not be harmonized within each quarter but only as an annual sum. The errors that occur because of this are kept in the adjustment item on the supply side.

The figures at constant and current prices are mostly independently harmonized. As the differences from the annual accounts may be different in these series, the seasonal patterns of the series will as well be differently adjusted. This will have consequences for the development of the price indices of the harmonized accounts.

#### 4.2.5. Some weaknesses of the compilation

In using the quarterly accounts figures, one has to keep in mind some weaknesses. The data sources are poor in some areas. In particular, data on service industries, construction and wholesale and retail trade are inaccurate. Areas with better statistical sources include manufacturing industries, private final consumption of goods (but not services) and foreign trade.

One way of measuring the quality of the quarterly accounts is to compare the figures from the first two versions of the annual accounts (they are compiled using more or less the same data sources as the quarterly accounts) with the Final Accounts. This is done in a study published (in norwegian) in "Økonomiske analyser" no.7, 1990 for the years 1972 to 1987. The article studies the growth rates of the main aggregates: GDP, private final consumption, government consumption, investments, exports, imports and value added in manufacturing. The conclusion is that the preliminary figures contain relatively large errors, both systematic (they tend to show too small growth rates) and random. Still, the overall picture does not change too much from the preliminary to the Final Accounts.

Another aspect of the quality of the quarterly accounts is the seasonal pattern. It is difficult to say how good this is, because we do not have anything like the Final Accounts to compare the

quarterly figures with. In addition, as mentioned above, the harmonization of the quarterly figures with the annual accounts leads to a change of the seasonal pattern of the series. This change may be different in various years depending on the magnitude of the errors. The development according to the harmonized series may be somewhat different from the originally computed series. An apparent change in the series may in fact be caused by technical factors referring to the computations.

In using the computed factor income figures one should be aware of the simple method of estimation which is applied, compared to that of

the annual accounts. Indirect taxes and subsidies by type are computed at a more aggregated level. Furthermore, it is only with a few exceptions that commodity deliveries to different uses are diversified in terms of prices. In general, distinctions are only made between prices on deliveries for domestic use and for exports.

Users of the quarterly accounts have to be careful in drawing strong conclusions based on changes from one quarter to the next. On the other hand, the figures may be of important value in studying trends over several quarters and for aggregates of variables.

**Emneinndelt oversikt**  
*Publications issued by the Central Bureau of Statistics since 1 January 1991.*  
*Survey arranged by subject matter*

**0. Generelle emner General subject matters**

Statistisk årbok 1991 *Statistical Yearbook.*  
 1991-496s. (NOS B; 980) 90 kr  
 ISBN 82-537-3564-2

**1. Naturressurser og naturmiljø Natural resources and environment**

**10. Ressurs- og miljøregnskap Resource and environment accounts**

Naturressurser og miljø 1990 Energi, luft, fisk, skog, jordbruk, holdninger til miljø-problemer, OECDs miljøtilstandsrapport. Ressursregnskap og analyser. 1991-160s. (RAPP; 91/1) 90 kr ISBN 82-537-3024-1

Naturressurser og miljø 1991 Energi, luft, fisk, skog, jordbruk, kommunale avløp, avfall, miljøindikatorer Ressursregnskap og analyser. 1992-154s. (RAPP; 92/1) 100 kr ISBN 82-537-3651-7

Natural Resources and the Environment 1990. 1991-150s. (RAPP; 91/1A) 100 kr ISBN 82-537-3558-8

Klima, økonomi og tiltak (KLØKT)/Knut Moum (red.) 1992-97s. (RAPP; 92/3) 90 kr ISBN 82-537-3647-9

**12. Energi Energy**

Effektivisering av kraftmarkedet/Torstein Bye og Tor Arnt Johnsen. 1991-39s. (RAPP; 91/13) 70 kr ISBN 82-537-3575-8

Substitusjon mellom olje og elektrisitet i produksjonssektorene i en makromodell/Hans Terje Mysen. 1991-43s. (RAPP; 91/7) 80 kr ISBN 82-537-3054-3

**19. Andre ressurs- og miljøemner Other subject matters related to resources and environment**

Modell for kraftsektoren/Tor Arnt Johnsen. 1991-42s. (RAPP; 91/12) 70 kr ISBN 82-537-3573-1

**2. Sosiodemografiske emner Sociodemographic subject matters**

**21. Befolkningsstatistikk Population**

Befolkningsstatistikk 1990 Hefte III  
*Oversikt Population Statistics Volume III Survey.* 1991-136s. (NOS B; 950) 70 kr  
 ISBN 82-537-3003-9

Befolkningsstatistikk 1991 Hefte I  
*Endringstal for kommunar 1989-1991 Population Statistics 1991 Volume I Population Changes in Municipalities.* 1991-55s. (NOS B; 963) 60 kr  
 ISBN 82-537-3046-2

Befolkningsstatistikk 1991 Hefte II  
*Folkemengd 1. januar Population Statistics 1991 Volume II Population 1 January.* 1991-149s. (NOS B; 978) 70 kr  
 ISBN 82-537-3059-4

Befolkningsstatistikk 1991 Hefte III  
*Oversikt Population Statistics Volume III Survey.* 1991-143s. (NOS B; 988) 70 kr  
 ISBN 82-537-3582-0

Familie- og yrkesundersøkelsen 1988 *Family and Occupation Survey.* 1991-187s. (NOS B; 959) 80 kr ISBN 82-537-3040-3

Framskriving av folkemengden Nasjonale og regionale tall 1990-2050 *Population Projects National and Regional Figures.* 1991-181s. (NOS B; 983) 80 kr ISBN 82-537-3571-5

Tallet på innvandrere og deres etterkommere fram mot år 2050/Per Sevaldsen. 1991-74s. (RAPP; 91/10) 60 kr ISBN 82-537-3567-7

**22. Helseforhold og helsetjeneste Health conditions and health services**

Dødsårsaker 1989 *Causes of Death.* 1991-175s. (NOS B; 955) 80 kr  
 ISBN 82-537-3012-8

Dødsårsaker 1990 *Causes of Death.* 1992-172s. (NOS C; 15) 85 kr  
 ISBN 82-537-3642-8
